OBJECTIVE

Java Developer specializing in backend development & web services, with 1 years of hands-on experience at OmiSoft. Experienced in building 5+ RESTful APIs and writing clean, maintainable code. Skilled in 10+ technologies. Looking to contribute to innovative fintech solutions by developing scalable systems handling 1000+ users and continuously expanding technical knowledge.

EDUCATION

Junior Bachelor

2020.09 - 2024.05

Kharkiv Computer Technology Professional College

GPA: 4.5 / 5.0

WORK EXPERIENCE

2023-2024 | OMISOFT

- Developed and maintained backend components for a task management web app (similar to Jira) over 6 months, focusing on RESTful API design and implementation
- Built 6 web services using Java & Spring Boot with clean, maintainable architecture
- Implemented CRUD operations and business logic for tasks, users, and project workflows
- Worked with PostgreSQL, including schema design, writing 50+ SQL queries, and integrating via Spring Data JPA / Hibernate
- Applied REST principles to improve application structure and performance
- Implemented basic authentication & authorization using Spring Security
- Tested APIs with Postman, performed debugging and performance optimizations
- Used Git for version control and code management

LANGUAGES

- Polish - B2
- Russian - C2
- Ukrainian - C2
- Portuguese - A2
- English - B2

SKILLS

- **PROGRAMMING LANGUAGES**

Java, SQL

- **WEB**

HTML, CSS, JavaScript,
REST API's, Spring
Framework

- **DATABASES**

PostgreSQL,
MySQL, Oracle

- **TECH SKILLS**

Maven / Gradle
Git / GitHub / GitLab
IntelliJ IDEA / Eclipse
Docker basics
SOLID

- **CLOUD**

AWS, docker

- **OPERATION SYSTEM**

MAC,
Linux(Ubuntu),
Windows

PROJECTS

- **TEAM ORGANIZER (2023, 6 MONTHS)**

- Architected and shipped 5+ RESTful APIs in Spring Boot that became the backbone of the team's daily workflow
- Designed a PostgreSQL schema handling 50+ tasks, users, and teams – kept it clean, indexed, and fast
- Built auth from scratch: registration, login, role-based access – no third-party shortcuts
- Wired the backend to a React frontend, resolving CORS, DTO mapping, and contract mismatches along the way
- Cut task planning overhead by 40% – managers stopped chasing status updates in chats
- Stack: Java, Spring Boot, PostgreSQL, REST, Maven, Git

- **SURF MARKETPLACE WEB SERVICE (NOV 2024 – FEB 2025)**

- Delivered 5+ production-ready APIs for product search and order handling under real load conditions
- Dropped average API response time by 37% by introducing Redis caching on hot endpoints – measurable, not estimated
- Covered critical business logic with 20+ unit tests (JUnit / Mockito) – caught 3 regressions before they hit staging
- Kept API contracts stable across multiple frontend iterations without breaking changes
- Stack: Java, Spring Boot, PostgreSQL, Redis, REST, JUnit, Maven, Git

- **CONSTRUCTION HIRING APP (SEP 2025 – FEB 2026)**

- Built the entire backend layer for managing 100+ employees and projects across departments
- Designed APIs for worker assignment logic – replaced a manual spreadsheet process the team had used for years
- Implemented role-based data access so each user level only sees what they're supposed to – zero data leaks in QA
- Set up CI/CD pipeline, reducing deploy time and eliminating manual release steps for the team
- Stack: Java, Spring Boot, PostgreSQL, REST, Maven, Git, CI/CD
